

Model	ED55C-E4	ED56C-E4
Type	Component	Component
Configuration	2-Way	2-Way
Speaker Size	5.25" (130mm)	6.5" (165mm)
Peak/RMS Power	200W/100W	220W/110W
Freq.Response	80Hz - 20kHz	65Hz - 20kHz
Impedance	4Ω	4Ω
Mount Depth	1.8" (46mm)	2.4" (61mm)
Mount Dia	4.4" (112mm)	5.6 (142mm)
Grille	Yes	Yes

EDGE STREET COMPONENTS

Refined Performance

For our all new EDS series speakers, our R&D engineers set the goal of creating the best sounding speakers we have ever made. A combination of precision engineering, perfectly balanced components and endless testing and tuning. As well as building open much of the design benefits of out latest pro speakers. Everything packaged together results in the new EDS component speaker range from EDGE.

The magnus cone is the result of careful research and engineering while developing our pro drivers which has been passed down to this iteration of the street component series. The dimpled cone helps add extra rigidity and overall strength to the cone resulting in less deformation and as a result a cleaner sound. The dimpled cone also has the hidden effect of slightly increasing cone surface area allowing the speakers to get a louder sound from there respective sizes.

BEST SOUND - The Street series receives some of the best technology from all of our ranges and is packaged into one affordable platform, this these speakers are no exception, offering superior audio quality.

BEST TECHNOLOGY - Featuring an oversized Peizo (PEI) tweeter , precision OFC voice coil, ultra lightweight cone and a large ferrite magnet, all for an enhanced sound.

GOOD FITMENT - Our new EDGE street speakers feature a multi-fit basket design allowing fitment in most vehicles..

BEST STYLING - Featuring a stealthy black look with signature edge orange accents on the tweeter these speakers are able to integrate into many vehicles while still looking good with there striking design.

FOAM SURROUND

Foam surround for greater control of the cone offering smoother bass reproduction.

Component

Component setup with a Peizo tweeter. The component setup allows for a superior sound stage as it allows the tweeter to be placed in a more ideal location closer to the listener.

MAGNUS CONE

The “golf ball style” magnus cone increases the structural rigidity of the speaker cone. Allowing for less distortion and a cleaner sound.

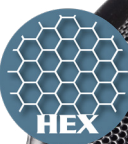

SPADE TERMINAL

Spade terminal for quick and secure connections to the speaker.

PAPER COMPOSITE

Strong specially formulated paper composite cone for a rich and warm sound reproduction.

STEEL MESH GRILLE

Steel mesh grille protects the speaker from damage.
